This tax season, the Earned Income Tax Credit (EITC) will benefit millions of low- and modest-income working families by supplementing their earnings and helping them make ends meet during this severe economic downturn. The EITC is a refundable federal tax credit for low- and modest-income workers. Over the years it has helped to lift more children out of poverty than any other anti-poverty program.[1] With a growing number of working families struggling against the rapid downturn in the economy, it is especially important that all eligible families and individuals know about the EITC and how to take full advantage of it. It could mean the difference between a family being able to pay the rent or having to stay at a homeless shelter.

More than 13 million children in America are poor, and that number is bound to rise as a result of the current recession. According to the most recent estimate, the EITC lifted 4.4 million Americans out of poverty, including 2.4 million children in 2003. Without the income supplement that the EITC provides, it is estimated that the child poverty rate would be one-fourth higher.[2] Additionally, the EITC can have other benefits beyond family economic security. According to a recent study, the EITC significantly improves children's academic achievement and is found to be especially beneficial to children from disadvantaged families. It can also have a significant positive impact on the economy of the community as a whole. According to data from the IRS, 816,700 Ohio taxpayers received the EITC in tax year 2006, with an average benefit amount of $1,875. This represents a $1.5 billion investment in Ohio families, individuals and the communities in which they live, work and play. A total of $43.7 billion was invested nationally.[3]

Regrettably, however, the ability of the EITC has not been fully realized. Filing taxes can be difficult to do alone and expensive for many families who use commercial tax preparers. In fact, tax preparation fees, Refund Anticipation Loans (RALs) and other commercial products drained $105.2 million from the pockets of hard-working Ohio families in tax year 2006. Fortunately though, the growth of free tax preparation sites in recent years now gives taxpayers more options. These sites offer electronic filing and direct deposit of refunds, allowing taxpayers to get their money in two weeks or less without any unnecessary fees. With the money saved, families can pay bills, purchase needed household items and maybe even save some money. Helping families keep their earned benefits is particularly important now as families struggle more than ever to meet their basic needs.

Especially during this tax season, it is essential that already financially strapped Ohio families fully benefit from the EITC. The stakes are extremely high. The EITC can substantially supplement earnings with these maximum benefit levels for tax year 2008:

- $4,824 for families with two or more children
- $2,917 for families with one child
- $438 for individuals between the ages of 25 and 64 with no children

Many working families who receive the EITC are also eligible for the Child Tax Credit—an income supplement for families with children with income above $8,500. This credit can result in a family receiving as much as $1,000 for each child claimed.

Benefits of the EITC Beyond Individual and Family Income

Research has shown that the EITC improves the well-being of children and their families—including increased academic achievement among children and a more stable home environment. The EITC may improve academic achievement by boosting a family's ability to provide food, clothes, books, shelter, and other items that contribute to a child's development. According to a recent study, increased family income from the EITC significantly increases children's math and reading test scores. This is found to be especially true for the most disadvantaged families and for families with younger children. According to the authors, the EITC can raise the future earnings of children whose families benefit from the EITC by as much as 1 to 2 percent.[4] Tax benefits directed to families with children may also improve children's well-being by reducing stress and conflict and improving the psychological well-being of the entire family. Recent research finds that child tax benefits improve

several indicators of emotional and behavioral well-being for children and their mothers— especially physical aggression and maternal depression. [5]

The financial benefit of the EITC also extends beyond enhancing the income and well-being of lower-wage, working families and their children. The EITC also infuses substantial money into the local economy.[6] One survey in North Carolina has shown that most EITC recipients use their refunds to meet short- to medium-term needs such as repairing cars, catching up on rent and utility bills, and purchasing clothes for their children.[7] An analysis by researchers in San Antonio concluded that increasing the number of EITC claims would be highly beneficial, with each additional dollar received generating roughly $1.58 in local economic activity.[8] Another study found that in Baltimore the additional spending from the EITC in the 2002 tax year generated almost $600,000 in local income and property tax revenues.[9] These multiplier effects in state and local economies indicate that the EITC is important to community growth and productivity and even more crucial during a recession.

Billions Lost Annually in EITC Benefits for Working Families

Increased education and advocacy to expand awareness of the EITC and promote its greater use have encouraged millions of working families to claim essential benefits they have earned. However, as indicated, the full potential of the EITC to decrease poverty has not been attained. For tax year 2006, tax preparation fees, RALs, and other commercial products diverted a total of $105.2 million in EITC benefits from Ohio workers and their families, and $3.1 billion nationally. Figure 1 highlights the losses in urban areas in Ohio with the highest number of returns filed in tax year 2006.

Figure 1: Total Dollars Lost to Tax Preparation Fees, Refund Anticipation Loans (RALs) and Refund Anticipation Checks (RACs) in Ohio Cities with the Highest Number of Returns Filed, Tax Year 2006

Notes: *Of those who receive a refund

****Calculated based on a $150 average tax preparation fee, a $100 average RAL cost and a $30 average RAC cost.**

Three major factors account for this drain on EITC funds:

- **Tax preparation fees.** For millions of tax filers, the complexity of tax laws and the time required to compile necessary documentation to prepare and file tax returns often seem onerous. As a result, a significant portion of U.S. tax filers turn to commercial tax preparation services and private tax consultants to prepare their federal and state tax returns. This is especially the case among EITC recipients, who typically pay about $150 to have their taxes prepared.[10] For tax year 2006, 70 percent of EITC recipients in the United States paid to have their returns completed professionally,

compared to 51 percent of non-EITC recipients. Nationwide, tax preparation fees drained nearly $2.4 billion in EITC benefits from the pockets of families and individuals, and $77.9 million in Ohio alone.

- **Refund Anticipation Loans.** Refund Anticipation Loans (RALs) are high-risk, high-cost, short-term loans taken out against a taxpayer's expected refund. Taxpayers who take out RALs often cite the expediency of the loan and the fact that they do not have to pay tax preparation fees before receiving their loan as major factors in their decision to take out a RAL. EITC recipients are more likely than other tax refund recipients to accelerate receipt of their tax funds. In fact, they are nearly eight times as likely to secure a Refund Anticipation Loan (RAL) as taxpayers who did not file for that credit. An estimated 233,000 taxpayers in Ohio, 29.4 percent of those who received EITC refunds, purchased RALs for the 2006 tax year. This contrasted with 3.7 percent of non-EITC filers that same year who took out RALs.

  This wide disparity is attributable in part to the aggressive marketing of RALs to the working poor and minorities within their communities. Black and Latino taxpayers disproportionately take out RALs, and Native American reservations also have high concentrations of these loans.[11] RALs also are frequently offered in locations not typically used for financial services, including auto dealerships, pawn shops, and rent-to-own stores. Documented marketing techniques include targeting tax filers to use their loan toward a down payment on a car or to purchase items in the store.[12]

  These short-term loans used *to borrow a filer's own money* can have effective annual interest rates (APR) ranging from about 50 percent to almost 500 percent.[13] They can end up costing clients a sizeable portion of their refunds. Unfortunately, it is those workers who most need their hard-earned income that are often sold short-term, expensive RALs.

  In tax year 2006, for example, a taxpayer purchasing a RAL typically paid $100 solely to get his or her refund the same day or within a few days, as most RALs offer.[14] In Ohio, these fees totaled a $23.3 million loss in EITC benefits. Combining the costs of tax preparation and RAL fees, the typical EITC recipient in the U.S. who obtains a RAL loses an estimated 7.8 percent of his or her federal refund.

  The extent of RAL usage among EITC recipients remained steady between tax years 2005 and 2006. However, there have been several recent developments in RAL marketing and regulation—both positive and negative. While "pay stub" or "holiday" RALs, which pose additional costs and risks to taxpayers, were almost entirely eliminated during the 2008 tax season due to pressure from community groups and consumer advocates, they have returned among some of the biggest RAL vendors.[15] These RALs are available to taxpayers prior to receiving their W-2s and are taken out against their expected refund. On the positive side, there have been some recent checks imposed on RALS. The IRS announced it was considering restricting the sharing of tax return information with those who market RALs and other financial products sold to access tax refunds. Additionally, interest rates and fees on RALs for members of the military were capped at a maximum APR of 36 percent.

- **Other products and fees.** There are also EITC recipients who purchase other types of financial products to access their refunds. For example, data from the IRS reveal that for tax year 2006 an estimated 18.7 percent of the EITC recipients nationwide received a Refund Anticipation Check (RAC), a non-loan financial product in which an account is temporarily opened for taxpayers to receive their refund even though they do not receive their refund any sooner than the IRS sends it. The RACs drained $120 million from their EITC benefits nationwide and $3.9 million in Ohio alone. Additional fees associated with RALs and RACs—such as application and administrative fees—also sap millions from the refunds of EITC recipients.

Extensive use of tax preparation services, RALs and other commercial products used to access tax refunds detrimentally impacts local economies across the country. Figure 2 highlights the losses endured by counties with the highest number of tax returns filed in Ohio.

Figure 2: Ohio Counties with the Highest Number of Total Returns Filed, Tax Year 2006

Recommendations to Maximize EITC Benefits for Working Families

While millions of families and individuals across the country have benefited immensely from the EITC, these same taxpayers lost an estimated total of $3.1 billion in fees from commercial tax preparation, RALs and other products used to access tax refunds for tax year 2006 alone. Government officials and community leaders need to enact or implement policies to mitigate the effect of RALs and costly tax preparation fees on lower-income communities. These efforts are especially important during the economic downturn we are currently experiencing as lower-income families are struggling more than ever.

To maximize EITC benefits by reducing RAL usage, the Children's Defense Fund recommends the following key measures:

1. Expand access to free tax assistance. A substantial share of taxpayers in Ohio pay to have their taxes completed and filed. Yet alternatives have emerged to reduce the cost of tax filing for

low-income individuals and families. The most important of these are free tax preparation sites—particularly Volunteer Income Tax Assistance (VITA) and Tax Counseling for the Elderly (TCE) programs, which helped more than 3 million taxpayers across the country for tax year 2007.[16] These sites typically offer electronic filing and direct deposit of refunds, allowing taxpayers to receive their money in two weeks or less without any fees. With the money saved, families can enhance their own financial stability by paying bills, purchasing needed household items and/or increasing savings. It is essential that elected officials and community leaders find ways to build and maintain free tax preparation networks across the country by investing through increased funding and outreach in the VITA and TCE programs and other free tax assistance centers.

2. **Strengthen consumer protections.** During recent sessions of Congress, EITC and RAL legislation has failed to gain solid traction. Meanwhile, low-income families in Ohio continue to lose significant portions of their intended EITC benefits. This year lawmakers must take action to adopt policies that protect consumers. These include: establishing licensing requirements for commercial tax preparers; ensuring full disclosure of RAL fees and interest rates; and capping interest rates and fees that banks can charge for RALs. Additionally, the IRS should shorten the turnaround time for tax refunds so that workers are less likely to request a RAL in order to receive their refunds more quickly.

3. **Connect working families to mainstream financial services.** A high priority should be to improve the financial literacy of low-income families in Ohio so they can build a stronger financial future for themselves, their children and the communities where they live. Free or low-cost checking and savings accounts, credit counseling opportunities, and financial education programs offer working families important tools to forge and secure a more stable financial future. Public-private partnerships should be promoted and established to ensure that working families have easy access to these resources throughout the year and not just during tax season.

4. **Institute a state EITC in Ohio.** Since the vast majority of poor children live in families with a working parent, the institution of a state EITC in Ohio could further supplement wages and help lift our most vulnerable families out of poverty. Currently only 23 states and the District of Columbia have a state EITC in effect. In addition, New York City; San Francisco; and Montgomery County, Maryland, offer local Earned Income Tax Credits.

Step Up and Take Action

Now is the time to step up and take action to ensure that families in your community claim and keep all of the tax benefits they have earned to help them weather this recession.

- Volunteer at a free tax-preparation site to help low-income families access the tax benefits they qualify for and avoid costly tax preparation fees.

- Work with a local bank representative to host financial workshops for low-income families to provide them with the knowledge and tools necessary to build a better financial future. Increasing the financial literacy of families will connect them to mainstream financial services and help them make more informed financial decisions.

- Call or write your Members of Congress and tell them to enact legislation that caps interest rates and fees on RALs and ensures their full disclosure. Also, contact your state lawmaker and tell him or her to institute a state EITC in Ohio.
