We appreciate and thank the Annie E. Casey Foundation for its funding and support of the publication of this data book. The findings and conclusions presented in this book are those of Children's Defense Fund Ohio, and do not necessarily represent the opinions of the Foundation.

Any and all portions of this data book may be reproduced without prior permission, provided the source is cited. Questions about the contents of this book may be directed to Barbara Turpin, KIDS COUNT Project Director at Children's Defense Fund Ohio, at bturpin@cdfohio.org or 614-221-2244.

What Is KIDS COUNT?

KIDS COUNT is a project of the Annie E. Casey Foundation which is a national and state-by-state effort to track the status of children in the U.S. By providing policymakers and citizens with benchmarks of child well-being, the KIDS COUNT goal is to enrich local, state, and national discussions concerning ways to secure better futures for all children.

Children's Defense Fund – Ohio serves as the state-level KIDS COUNT grantee for Ohio. As part of the KIDS COUNT network, CDF – Ohio strives to improve programs and policies for children and families by collecting and reporting credible data and promoting the use of data-based advocacy and communications strategies by releasing periodic issue briefs, issuing an annual state data book regarding the well-being of children and families in Ohio, and providing other resources available on our website. Please visit our website at www.childrensdefense.org to locate an electronic copy of this data book, the state and county fact sheets, other resources and previous KIDS COUNT publications. CDF-Ohio staff is available to present KIDS COUNT information to groups and agencies.

Ohio KIDS COUNT is a project of Children's Defense Fund-Ohio.

About Children's Defense Fund

Children's Defense Fund-Ohio

Children's Defense Fund (CDF) was founded in 1973 by Marian Wright Edelman to provide a strong and effective voice for *all* the children of America, since they cannot vote, hire lobbyists, or speak out for themselves. CDF's Leave No Child Behind® mission is to ensure every child a *Healthy Start*, a *Head Start*, a *Fair Start*, a *Safe Start*, and a *Moral Start* in life and successful passage to adulthood with the help of caring families and communities.

We pay particular attention to the needs of poor and minority children and those with disabilities. CDF encourages preventive investment before children get sick or into trouble, drop out of school or suffer family breakdown. Using research and data, we work to shape federal, state and local policies that best serve our children's needs in a cost-effective manner.

CDF is a private, nonprofit, nonpartisan research and advocacy organization supported by foundations, corporate grants, and individual donations. As an independent voice for children, CDF does not accept government funds. Children's Defense Fund Ohio began its work in 1981.

About This Data Book

Ohio's KIDS COUNT: 2007 Data Book provides the most current, accurate information available about the well-being of Ohio's children. It contains updated data for 14 indicators in four categories of well-being that Children's Defense Fund Ohio will monitor annually, as well as additional featured indicators to draw attention to key trends in Ohio. Each well-being category includes information about and a summary of the trends for each of the indicators. There are also charts and graphs to compare the state and county data as well as additional links to resources to help readers better understand and make the data useful. We have included technical and data notes which provide definitions and identify data sources.

There are individual fact sheets which contain data on the indicators for Ohio and each of the 88 counties. The data book and the fact sheets are also available on our website at www.childrensdefense.org.

INTRODUCTION

“ *A Hundred years From Now...
it will not matter what my bank
account was, the sort of house
I lived in, or the kind of car I
drove... but the world may be
different because I was important
in the life of a CHILD.* ”

Dr. Forest E. Witcraft
from “*Within My Power*”

This year’s annual data book focuses on areas that make a difference in the well-being of Ohio’s children before and after they are born. The four categories are:

ECONOMIC SECURITY • HEALTH • EDUCATION • SAFETY

Within these categories are 14 child-well being indicators that we have identified to measure the progress Ohio and each of the counties is making towards improving the lives and futures of its children and communities.

Based on what we know through volumes of research, these areas individually and together impact the lives of our children and society. When family income rises, poor children experience better developmental outcomes. Providing health care coverage for women and children is less costly, both in health outcomes and the cost to the community, than allowing them to be uninsured.

Failure to support the areas that impact child well-being creates an adverse domino effect for children. The child who does not have breakfast has difficulty concentrating on the teacher’s instructions and becomes a behavior problem; the uninsured child who does not have access to dental care may end up requiring thousands of dollars worth of hospital care and ultimately dying from an untreated abscess; or the child who ends up in the foster care system is more likely to become homeless and involved with the criminal justice system.

The public will must respond holistically to the needs of children because children don’t come in pieces. In order for a child to thrive and have a productive future, communities, existing family serving systems, legislators, public, private and nonprofit organizations must come together to collectively meet our children’s needs.

—November 2007, *Children’s Defense Fund-Ohio*

WHO ARE OHIO'S CHILDREN?

It would take 27 Ohio State University football stadiums to hold the more than 2.7 million Ohio children under the age of 18. There are about equal numbers of younger children and teens. Each one of these children should have the opportunity to attend The Ohio State University or whatever higher education institution they choose. But, as the data shows, we know that is not the case. Although Ohio's rate of teens dropping out of high school has improved, six percent of teens continue to dropout, eight percent of teens are not attending school and not working, and over 12,000 babies were born to teen mothers. Over 200,000 of our children are without health insurance, which has an impact on the quality of every day life for these children, their families and the community.

The majority (78%) of Ohio's children are White, 15% are Black and there has been an 18% increase in children of more than one race between 2001 and 2005. Ohio is home to an increasing immigrant population. There has been a 15% increase in the Asian/Pacific Islander and an 8% increase in the Hispanic/Latino populations between 2001 and 2005. Between 2000 and 2005 there has been a 17% overall increase in the number of children in immigrant families. These families originate from Asia, Mexico, Central America and an increasing population from Africa. This increase of children in families coming from outside of the United States has created challenges for our educational, social support and community systems at-large. It is important that the needs of these children are not overlooked or ignored.

The economic outlook is not good for Ohio's children, with a 13% increase in the percentage of children living in families where no parent has full-time, year-round employment and a 19% increase in the percentage of children living in poverty between 2000 and 2005. Annually, over 28,000 Ohio children live in foster care and are in need of a permanent family connection with 1,300 aging out of the system with no permanent family. Over 100,000 children are living in the care of grandparents where there is no parent present.

Since the early 1990's, Ohio has consistently ranked in the mid-range of states for the KIDS COUNT child well-being indicators. We hope the leaders and citizens of Ohio will realize the urgent need, as indicated by this data, to focus on improving the lives of our children, ultimately resulting in a more prosperous future for all Ohioans.

Chart 1

County Type	Child Poverty 2005	Low Birth Rate 2005	Graduation Rate 2004-05	Children in Substitute Care 2005 (rate/1000)

ECONOMIC SECURITY

The future prosperity and success of Ohio depends on all children having a fair start in life, by growing up in families with adequate income to provide food, housing, clothing and other basic needs.

The national *KIDS COUNT Indicator Brief on Reducing the Child Poverty Rate* describes five strategies that have the best chance of lifting many families and children out of poverty, and move toward greater economic security:

- Build political will to reduce child poverty.
- Create more living-wage jobs.
- Strengthen the economic safety net.
- Help low-income families keep more of what they earn.
- Help low-income families build savings and assets.¹

How We Measure It

Kids Count Ohio measures economic security for children by looking at five factors: children living in poverty, children receiving free or reduced price school lunch, children receiving food stamps, children in the child care assistance program, and the state and county unemployment rates. (Complete data definitions can be found on page 118).

Ohio Child Poverty Rate, 2004

Children Living in Poverty

As the national KIDS COUNT Indicator Brief on child poverty notes, “The percentage of children who live in poverty is among the most widely used indicators of child well-being because poverty is associated with so many potential negative outcomes in the areas of health, education, emotional well-being, delinquency, and occupational attainment.”² In Ohio, an estimated 463,954 children, almost 17%, were living in families making less than the poverty rate in 2004. This number has varied year by year since 2001. Of these families, 72% have single parents, 32% have unemployed parents and 53% of parents lack a high school education. Child poverty is not evenly distributed among Ohio counties. It ranges from over 26% in Gallia, Lawrence, Meigs, Pike, Scioto and Vinton counties, to being below 10% in Auglaize, Delaware, Geauga, Lake, Medina, Mercer, Putnam, Union, Warren, Wood and Wyandot counties. (See Map).

Children Receiving Free or Reduced-Price School Lunch

Measuring the percentage of children in the federal school lunch program is a way to capture the

economic well being of school age children, since the cut-off for program enrollment is 180% of the federal poverty guidelines.

Children of color in Ohio are more likely to live in low-income families than their white peers. The National Center for Children in Poverty uses census data to calculate that 2 out of 3 African American children in Ohio live in low-income families, compared to half of Latino children and about 28% of white children.³ Low-income children also shared a number of other family characteristics, including being more likely to have unemployed parents or single parents, and more housing instability. (See Chart 2).

Data from the state school lunch program shows that in school year 2003-04, one-third of students were eligible for free or reduced price school lunch, based on their applications for the program. This percentage increased somewhat from 29% in school year 2001-02. As with child poverty, Ohio counties vary greatly in the percentage of students receiving free or reduced price lunch, ranging from under 12% in Warren, Delaware, and Geauga counties, to more than half of students in Meigs, Adams, and Vinton counties.

Chart 2

Income	Ohio	U.S.
Children below Poverty Line	17%	18%
Children in Low-Income Families (<200% of poverty)	36%	39%
Family Characteristics		
	Low-Income	Above Low-Income
Parents Unemployed	19%	1%
Single Parent Family	57%	17%
Moved in the Last Year	19%	8%
Owens a Home	47%	88%

Source: National Center for children in Poverty, Demographic Profiles, 2007. www.nccp.org

Unemployment Rate

When low-income parents have adequate income and work supports, they are able to bolster their employment stability, their earnings, and the health and well being of their children. As the national Kids Count report *Increasing the Percentage of Children Whose Families Have Stable Employment*

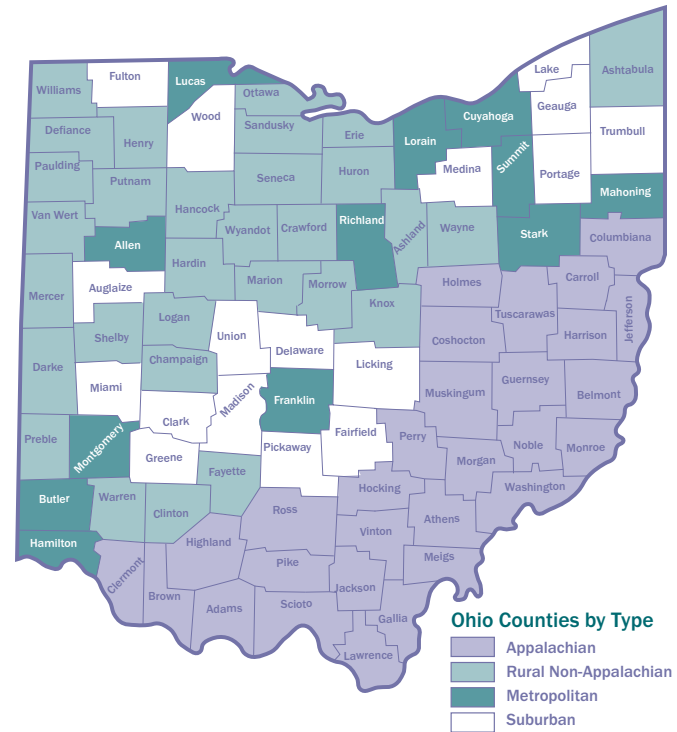

notes, “When parents have secure employment, with earnings sufficient to meet their families’ basic needs, children benefit in many ways. Their odds of having good nutrition, decent, stable housing, and adequate health care increase. Employment affects children in other ways as well... Unstable employment or working at multiple unrelated jobs is associated with adults’ poor health and early death. By easing parental depression and alleviating stress, employment can improve family functioning and create a more positive home setting for children. In addition, going to work can put parents in contact with wider social networks, which can contribute to better physical and mental health.

Wider social networks also expand parents’ access to information and resources that can help them support their children’s development and education.”⁴

According to data from the U.S. Census Bureau compiled by the National Center for Children in Poverty, 19% of low-income children in Ohio do not have an employed parent, and 33% have at least one parent working part-time or seasonally.⁵ In 2005, the annual unemployment rate for Ohio was close to 6%. This rate has been steady since 2002. The unemployment rate is more uniform across the state than other indicators in this category, although it reaches 10% or more in Meigs, Morgan, Monroe, and Pike counties.

Children Receiving Food Stamps

Hunger is a reality in Ohio, and participation in the food stamp program is one way to measure that risk. However, not all eligible families participate, and hunger remains a concern. According to Ohio Children’s Hunger Alliance, children in food insecure households, “live in a state of vulnerability, living each day without knowing where their next meal will come from – if one at all... Those who are food insecure often worry about where they will find their next meal and are often forced to seek assistance through emergency resources like food pantries or soup kitchens. However, our goal for all children is food security, which is defined as access at all times to enough food for active healthy living.”⁶

Almost 13% of households in Ohio experienced food insecurity from 2003-05, which was above the U.S. average of 11%, and an increase from 10% in 1996-98.⁷ The federal Food Stamp Program is one initiative to help reduce food insecurity. Nationally, about half of all food stamp recipients are children, and most live in households that do not receive other forms of cash assistance such as welfare or social security payments.⁸ In 2005, 520,666 Ohio children received food stamps, or about 1 in 5. This figure increased steadily from 2001. Similar to other indicators of family economic strength, Ohio counties differ widely in the percentage of children receiving food stamps, from a low of 3% in Geauga County, to a high of 34% in Scioto County.

Chart 3

Early Care Data From the National Survey of Children’s Health, 2003

INDICATOR	OHIO	U.S.
Early Childhood School % children ages 3-5 who regularly attended preschool, kindergarten, Head Start or Early Start during the past month	60.7%	60.3%
Child Care Use % children ages 0-5 who regularly attended non-parental child care during the past month?	66.8%	65.1%
Child Care Issues % children ages 0-5 whose parents who either had to make different child care arrangements in the past month and/or a job change due to child care reasons in the past year	33.2%	36.3%
Staying Home Alone % children ages 6-11 who stayed home alone during the past week	15.9%	18.4%

Source: Child and Adolescent Health Measurement Initiative (2005). National Survey of Children’s Health, Data Resource Center on Child and Adolescent Health www.nschdata.org

Children in Child Care Assistance Programs

The foundation for school success begins in early childhood. The building blocks for a child’s future brain development are put in place by their family and community environments. If these environments are strong, children have a good foundation for further learning once they enter school. However, children with weaker foundations do not fare as well. For example, a study that examines children’s educational success by the end of first grade found that children from families with low socioeconomic status, as well as non-white children and children who spoke a language other than English at home, had lower levels of cognitive achievement, social skills and physical well-being. This reflected differences at school entry that persisted and in some cases, widened over time.⁹

Chart 4

Average Weekly Cost for Full Time Child Care

Child Care Center	2001	2006
Infant	\$134	\$157
Toddler	\$119	\$142
Preschooler	\$107	\$128
Schoolager	\$93	\$110
Family Child Care Home	2001	2006
Infant	\$102	\$122
Toddler	\$101	\$116
Preschooler	\$94	\$110
Schoolager	\$90	\$100

Source: Ohio Child Care Resource and Referral Association

Data from the National Survey of Children's Health suggests that over 60% of Ohio children age 3-5 are in an early childhood education program, and 67% of all children under 5 are in some type of non-parental childcare setting each week. Ohio has several state-funded programs to help low-income children gain access to high-quality, early childhood education experiences.

In 2005, 95,966 children in Ohio received a subsidy to help cover the cost of their child care. This represents a decrease from 2003, but an increase from the number receiving assistance in 2001.

Turning Data Into Action

Tax Credits for Working Ohioans

The Earned Income Tax Credit (EITC) is the largest poverty reduction program in the United States. Each year EITC lifts millions of people above the poverty line. EITC is a federal tax benefit that reduces taxes for low to moderate income workers who meet the income requirements. Even workers whose earnings are too low to owe income tax can get EITC. This financial support gives working families an opportunity to support their families and the local economy.

The credit can be claimed when filing an annual return or throughout the year through the Advanced Earned Income Credit. In the 2004 tax year, Ohio had over 781,000 taxpayers claim an estimated \$1.4 billion in credits. The average total refund for all credits was \$2,954. For the 2007 tax year qualifying married couples earning less than \$35,241 with one child can receive up to \$2,853; single parent families earning less than \$33,241 with one child can receive a up to \$2,853. The maximum credit is \$4,716. Individuals may be eligible to receive EITC for the previous three years.

Many families eligible for EITC may also qualify for the federal Child Tax Credit (CTC). This is a credit for families with children 16 years of age or younger at the end of 2007. Children who qualify include sons, daughters, stepchildren, grandchildren, adopted and foster children, brothers, sisters, stepsiblings and their descendents such as nieces and nephews. The credit can be worth up to \$1,000 per child for the 2007 tax year. Eligible workers must have had taxable income above \$11,750 in 2007 and file a federal tax form.

Free tax preparation is available for individuals eligible for the EITC and CTC through Volunteer Income Tax Assistance (VITA) sites across Ohio. For more information about tax credit and tax preparation assistance, contact Sonja Shute with Children's Defense Fund Ohio at (614) 221-2244 or the Internal Revenue Service at 1-800-829-1040.

For More Information

The National Center for Children in Poverty <http://www.nccp.org>

The National Center for Children in Poverty (NCCP) is the nation's leading public policy center dedicated to promoting the economic security, health, and well-being of America's low-income families and children. NCCP uses research to inform policy and practice with the goal of ensuring positive outcomes for the next generation. We promote family-oriented solutions at the state and national levels.

Children's Hunger Alliance <http://www.childrenshungeralliance.org>

This organization focuses on combating child hunger throughout the state. CHA provides food and nutrition education to children, as well as contacts local communities and governmental agencies to expand existing nutrition programs. CHA has offices in a few major Ohio cities – Columbus, Cleveland, Cincinnati, and Dayton.

Ohio Department of Job and Family Services Office of Family Stability

<http://jfs.ohio.gov/ofam/index.stm>

This website offers links to the different food programs within the state (Commodity Supplemental Food Program, Emergency Food Assistance Program, and Food Stamps), and links to cash programs and other supportive services within the state.

Ohio Work First Program <http://jfs.ohio.gov/ofam/cmandfsa.stm>

Provides temporary assistance to needy families through the TANF program. The above link takes you to the page where individuals can apply for the Ohio Works First program and/or other assistance programs.

Ohio Office of Unemployment Compensation <http://jfs.ohio.gov/ouc/>

This office provides information and application for unemployment benefits and employment opportunities.

Ohio Child Care Resource and Referral Association <http://www.occrra.org/>

The Ohio Child Care Resource & Referral Association (OCCRRA) promotes the positive development of all children, especially those in out-of-home learning environments. OCCRRA's membership consists of resource and referral agencies providing services to families, early childhood professionals, and communities throughout Ohio. Each member agency maintains a regional database of child care providers, provides families with information on how to select care, increases the quality effectiveness of providers by offering professional development opportunities, and provides information to policy and decision makers.

When children have a healthy start in life by having a healthy birth, receiving good health care, and living in healthy environments, they are able to grow and flourish.

There are many social and environmental factors that affect children's health, and the presence or absence of these factors influence important conditions such as asthma; obesity; effects from lead, mercury and other environmental toxins; and mental health. There are many state and national initiatives to improve child health throughout the United States including those focused on improving maternal health and pregnancy outcomes, preventing adolescent pregnancies and births, and expanding health insurance to cover all children.

How We Measure It

Kids Count Ohio measures the health of children in Ohio counties by looking at three indicators available at the county level: births to adolescents, children born at low birth-weight, and children enrolled in public health care programs. (Complete data definitions can be found on page 118.)

Births to Adolescents

When adolescents give birth, it affects both the young parents themselves as well as their children. According to a summary of research from the national Kids Count *Indicator Brief on Reducing the Teen Birth Rate*, women who give birth before age 20 are more likely to drop out of school and to live in poverty. Their babies are more likely to be born at a low birth weight, experience health problems and developmental delays, experience abuse or neglect, and perform poorly in school. As they grow older, these children are more likely to drop out of school and end up as teen parents themselves.¹ In all of these ways, adolescent childbearing exacts a high cost both to individuals and to society as a whole.

In Ohio in 2004, 4,871 women under the age of 18 gave birth. The birth rate for 15-17 year olds was about 19 per 1000. This rate has declined somewhat since the first part of the decade (see Chart 5). The majority of Ohio counties had a decrease in this rate. A number of counties have rates much higher than the state rate, including Allen, Clinton, Fayette, Lucas, Jackson, Madison, Marion, Pike, Ross, and Scioto counties.

Chart 5

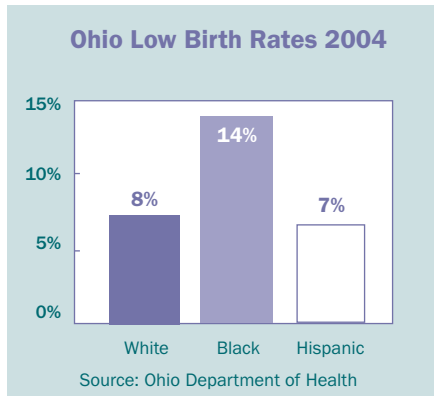

Chart 6

Children Born at Low Birth Weight

When children are born weighing less than 5.5 pounds, they are considered to be low birth weight. Low birth weight is frequently the result of preterm birth. According to the March of Dimes, risk factors for preterm birth include smoking during pregnancy, inadequate maternal weight gain, alcohol or drug use during pregnancy, and infections in the mother or the fetus. Multiple births, and births to women under age 17 and over age 35 are also more likely to be low birth weight. Children born at low birth weight are more susceptible to a host of problems, including increased health problems during infancy, long-term disability, and learning disorders.²

There are significant disparities in low birth weight by race. In Ohio, as well as nationally, African American women are twice as likely to have low birth weight babies than are white women. Nationally in 2004, rates of low birth weight were 14% for African American infants, 8% for Asians, and about 7% for American Indians, Latinos and whites.³ In Ohio, disparities by race are quite similar (see Chart 6).

Overall in 2004, 12,852 babies were born at low birth weight in Ohio, or about one out of eleven. This rate has mirrored the steady national increase, growing by 9% from 2001 to 2005. There are several Ohio counties where the percentage of babies born at low birth weight exceeds 10%, including Cuyahoga, Fayette, Gallia, Hamilton, Lawrence, Marion, Morgan, Perry, and Washington.

Children in Public Health Care Programs

Since 1997, expansions to Medicaid and creation of the State Children's Health Insurance Program (SCHIP) have reduced the level of uninsurance among children from 23% to 15% nationally. Children who have health insurance are more likely to have a usual source of care, to have well-child visits and dental visits, and less likely to have unmet health needs. When parents do not have employment-based coverage because either their jobs do not offer insurance or the family premiums are too expensive, their children lack insurance. Public health insurance programs can help meet this gap. Nationally, over one fourth of all children and over one half of low-income children receive medical care through public insurance programs.⁴

According to data assembled by the Kaiser Commission on Medicaid and the Uninsured, 8% of children in Ohio were uninsured in 2004-05, compared to 11% nationally. Children in Ohio were more likely to have employer-sponsored coverage, and poor children in Ohio were more likely to receive Medicaid than were children in the U.S. as a whole.⁵ In the state fiscal year 2005, 2,759,112 Ohio children received their health care through the Healthy Start (SCHIP) and Healthy Families

Chart 7

Selected Data From the National Survey of Children's Health, 2003

	OHIO	US
Overall Child Health Status % children whose overall health is excellent or very good	88.9%	84.1%
Moderate or Severe Health Problems % children with health problems rated as moderate or severe by parents	8.7%	7.9%
Impact of Asthma % children affected by asthma during past year	9.2%	8.0%
Missed School Days % school age children who missed 11 or more days of school in the past year due to illness or injury	5.9%	5.2%
Obesity % of children whose BMI indicates that they are overweight	14.2%	14.8%
Parents' Concerns % children ages 0-5 whose parents have one or more concerns about child's learning, development, or behavior	37.5%	36.6%
Socio-Emotional Difficulties % children ages 3-17 with moderate or severe difficulties in the area of emotions, concentration, behavior, or getting along with others	10.7%	9.2%
Breastfeeding % children ages 0-5 who were breastfed for any length of time	65.4%	72.3%
Preventive Health Care % children with a preventive medical care visit in the past year	80.1%	77.8%
Preventive Health and Dental Care % children with both a preventive medical care visit and a preventive dental care visit in the past year	61.2%	58.8%
Mental Health Care % children with current emotional, developmental, or behavioral problems who received some type of mental health care during the past year	61.2%	58.7%
Medical Home % children who have a personal doctor or nurse from whom they receive family-centered, accessible, comprehensive, culturally sensitive and coordinated health care	52.3%	46.1%

Source: Child and Adolescent Health Measurement Initiative (2005). National Survey of Children's Health, Data Resource Center on Child and Adolescent Health www.nschdata.org

Medicaid programs. This was 41% of all children in the state. In twenty-seven counties, 50% or more of children participate in these programs, including more than 70% in Pike and Vinton counties.

Children's Dental Health

Many children in Ohio face serious challenges to their oral health. According to a recent report from the Ohio Department of Health, *Oral Health and Access to Dental Care for Ohioans, 2007*, "Dental care remains the No.1 unmet health care need for Ohio children and low-income adults."

Cavities: 26% of children in third grade and 28% of 3-5-year-old Head Start children have untreated cavities.

Toothaches: One in 10 children has had a recent toothache.

Disparities: Disease rates are significantly higher among children from low-income families and those from Appalachia.

Access to Care: The children most likely to have untreated cavities are poor, non-white, and/or reside in Appalachian counties.

Uninsured: 23% of Ohio children (about 670,000) are uninsured for dental care.

Medicaid: Only 5% of Ohio Medicaid recipients under age 3, and 44% of those ages 3-18 years had a dental visit in 2005.

Turning Data into Action

Developing Pictures of Youth with Behavioral Health Care Needs

An oft-overlooked but integral factor in the well being of Ohio's children is the treatment of emotional and behavioral conditions. Synthesis Incorporated was founded in 1987 to conduct research and provide training to assist behavioral health service providers in the development and coordination of initiatives designed to foster more efficient and effective systems of care.

Over a period of years, Synthesis has developed an approach called Cluster-Based Planning and Outcomes Management (C-POM), which seeks to break through the tendency towards a "one-size-fits-all" system and which moves beyond the "fuzzy" description of youth as being Severely Emotionally Disabled. Cluster-Based Planning is a more holistic, historical approach which identifies natural subgroups (or clusters) within large clinical populations. Children and youth in these clusters share common strengths, problems, treatment histories, socio-environmental contexts or life situations.

Past experience and continuing research (funded by the Ohio Department of Mental Health and community agencies) are demonstrating that members of different clusters face different challenges and often require different types and intensities of services or treatment approaches.

Written descriptions of 10 clusters of youth and their families have been created using techniques which combine the knowledge from work groups of community experts representing schools, child protective services, mental health and substance abuse agencies, juvenile courts, parent advocacy groups, and health departments. Thus assessment and treatment for a depressed youth who for a long time may have felt lonely, unsuccessful, and out of place, even though s/he appeared to have many friends, may take a very different approach from an emotionally stronger child who is having trouble adjusting to a stressful life situation or crisis. This would be the case despite the two sharing some surface symptoms. Cluster-Based Planning seeks to create a common language across systems and for those involved in helping the youth and his/her family. This improved dialogue helps everyone target outcomes in order to more easily address the concerns of distressed youth.

The Maumee Valley Guidance Center, which works with troubled youth in Defiance, Fulton, Williams and Henry counties in Northwestern Ohio has incorporated C-POM into their youth case management training. There, entry-level caseworkers are trained in how to work with youth and their families to formulate treatment plans by using the clusters. Furthermore, the Center has used the cluster-based system to divide cases by specialization of the worker instead of geographically, as was the situation previously. Organizations such as the Madison County Department of Family and Children use C-POM to understand which clusters constitute the largest proportions of youth on their caseloads. This helps them plan for needed services and pinpoint existing services to address the specific needs of the youth in each cluster and their families.

Organizations such as Synthesis Incorporated are acting on behalf of Ohio's children by seeking to cultivate a greater understanding of youth with behavioral health care needs in order to improve the quality of such care for everyone.

For more information on Cluster-Based Planning and Outcomes Management, contact William Ruben with Synthesis, Inc., (800) 322-9441.

EDUCATION

When children have a head start in life and have high-quality early childhood and school age education, their future life-chances are greatly improved. Success in school also requires stability and regular attendance, and schools that are able to meet the needs of all learners. A recent report from Achieve, Inc. on *Creating a World-Class Educational System in Ohio* notes that, “The world’s highest-performing educational systems exhibit three common attributes, which reinforce each other to ensure system alignment and focus on delivering high levels of student achievement:

- **High challenge.** Sets high expectations for student achievement for those people most responsible for student achievement (students, teachers, principals, and superintendents)
- **High support.** Provides the necessary resources to and builds the capabilities of those same people to ensure that they can meet those high expectations of student achievement
- **Aligned incentives.** Includes both positive incentives and negative consequences for meeting (or failing to meet) those expectations of student achievement

“Simply put, these systems offer an important and balanced deal to students, teachers, principals and superintendents: in exchange for accountability for delivering high levels of student achievement (high challenge and aligned incentives), they provide the resources, opportunities, information, development and targeted help necessary (high support) so these expectations can successfully be met.”¹

What We Measure

Kids Count Ohio measures the educational wellbeing of children by looking at three indicators: fourth grade proficiency in reading and math, and high school graduation. (Complete data definitions can be found on page 118.)

Fourth Graders Proficient or Better in Reading and Math

According to experts at Child Trends, reading and math proficiency are important and fundamental skills for children to develop. They note, “Students who are competent readers, as measured by their performance on reading tests, are more likely to perform well in other subjects, such as math and science. Reading achievement also predicts one’s likelihood of graduating from high school and

attending college.” Adults with limited reading abilities also suffer a host of consequences, such as limited employment options and the inability to pass on reading skills to their children.

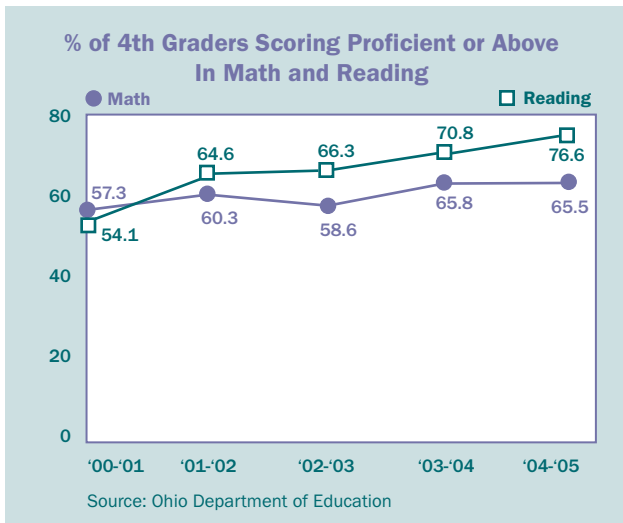

Reading skills also influence students’ well-being as adults. For instance, illiterate adults find it difficult to function in society, as many basic decision-making skills require reading proficiency. People who are not able to fill out an application because of limited reading or writing skills are likely to have difficulty finding a job. Strong reading skills protect against unemployment in early adulthood. Research has confirmed that performance on adult literacy tests helps to explain differences in wages. Further, adults with limited reading abilities are likely to pass these limitations on to their children.²

Math skills are also essential for functioning in every day life. Child Trends notes that students who take higher level mathematics and science courses which require strong fundamental skills in mathematics are more likely to attend and to complete college. Competence in mathematics skills is related to higher levels of employability and since 1976, the influence of high school students’ mathematics skills on earnings later in life has grown continuously.³

Nationally, reading scores for fourth graders on the National Assessment of Educational Progress were not significantly different in 2005 from 1992. However, national math scores have increased

steadily since 1990. In Ohio in the 2004-05 school year, 77% of fourth grade students tested at the proficient level or above for reading. Sixty-six percent were at this level for math. Test scores improved at the state level for both reading and math during the past five years (See Chart 8), although math improvements were less dramatic and the percentage of students at the proficient level or above remains lower than for reading. There are several counties lagging up to 10 percentage points behind the state levels in reading and 20 percentage points in math. These counties include Vinton, Harrison, Morgan, Adams, Pike, Meigs, Guernsey, Marion, and Fayette.

Chart 8

Students Graduating From High School

Making sure that all students graduate with a high school diploma is increasingly important. As the national Kids Count Indicator Brief on *Reducing the High School Drop-out Rate* notes, “Over the past two decades, people without high school diplomas have suffered an absolute decline in real income and have dropped further behind individuals with more education. The result is a pattern of

increased economic marginalization for those with the least education. Dropouts who subsequently complete the requirements for a General Educational Diploma (GED) fare somewhat better than those who do not, but their earning capacity remains very limited.⁴

In 2005, the state Department of Education reported a graduation rate of 86.2% for Ohio high school seniors, a steady increase since 2000-01. Significant disparities in graduation rates exist by race and ethnicity; 74% of Latinos and 68% of African Americans graduated, compared to 90% of white students and 93% of Asian students (see Chart 9). Graduation rates also varied by county. Several urban counties, including Cuyahoga, Franklin, Lucas, Hamilton and Summit, had the lowest graduation rates in Ohio.

Turning Data into Action

Child Care Quality Rating Program

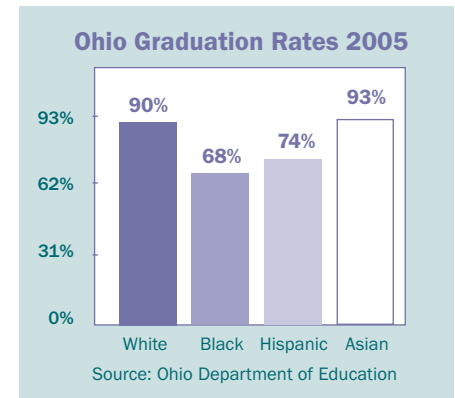

In the first two and one half years of life, 85% of a child’s brain is developed and research shows that the number of words a child enters Kindergarten with is the greatest predictor of school success. Of the 130,000 Ohio children who entered Kindergarten in 2005, 40,000 needed intervention services and several thousand will repeat kindergarten or a primary grade with only 1 in 8 catching up. The 2007 reading assessment test showed only 36% of 4th grade students were at or above proficient.

Step Up To Quality (SUTQ), a statewide voluntary quality child care rating initiative, was implemented by the Ohio Department of Job and Family Services in late 2006. The goal of this program is to promote school readiness by improving the quality of early care and education for all children while providing parents with an easy to use tool to assist them in making an informed decision when selecting an early childhood program for their child.

SUTQ recognizes early care and education programs that exceed quality benchmarks over and above minimum health and safety licensing standards. The program is based on national research identifying the key benchmarks that lead to improved outcomes for children. These benchmarks include low child to staff ratios, group size, accreditation, staff education, specialized training, improved workplace characteristics and early learning standards.

One, Two and Three Star rated programs provide lower staff to child ratios, administrators and teachers with higher qualifications and more specialized training in early childhood development and learning, teachers who are familiar with Ohio’s Early Learning Content standards which

Chart 9

outline what children should know and be able to do when they enter kindergarten, and have increased administrative supports in the area of benefits and compensation.

There are approximately 4,100 licensed centers in Ohio. In SUTQ's first year, more than 400 programs are participating. A total of 11,490 children are served in 141 programs that have earned a star rating.

For more information about Ohio's Step Up To Quality program and to locate child care providers who are rated, contact the Ohio Department of Job and Family Services at (614) 466-6650 or visit their website at http://jfs.ohio.gov/families/child_care/index.stm.

⁴ Shore, Rima. KIDS COUNT Indicator Brief Reducing the High School Drop-Out Rate. Reducing the Child Poverty Rate. Baltimore, MD: Annie E Casey Foundation, 2005. Available at: www.aecf.org/KnowledgeCenter/PublicationsSeries/KCIndicatorBriefs.aspx

Giving all children a safe start in life is important, because not all children grow up in an environment of physical and emotional safety, free from violence. When their families, communities, homes and schools work together to create healthy, safe and nurturing environments for children, they are able to grow up to be well-functioning adults and good parents themselves.

How We Measure It

Kids Count Ohio measures child safety by looking at three county-level indicators: children abused or neglected, children in foster care, and felony adjudications of adolescents. (Complete data definitions can be found on page 118.)

The Indicators

Child Abuse and Neglect

Children in Foster Care

Maltreatment during childhood has profound and lasting experiences for the victims. However, home visiting programs and other help for families hold the possibility of reducing the incidence of child abuse and neglect. Children who experience abuse or neglect from parents or other caregivers are at increased risk for experiencing adverse health effects and behaviors as adults, including smoking, alcoholism, drug abuse, physical inactivity, severe obesity, depression, suicide, sexual promiscuity, and certain chronic diseases. Victims of child maltreatment are also at increased risk of experiencing violence as adults. As many as one third of parents who experienced maltreatment in childhood may victimize their own children.¹

For children who cannot remain safely with their families, it is important to have an effective and fair foster care system, and to fully utilize the care that relatives can provide. Child welfare services in Ohio are delivered in a state-supervised, county administered system. The Ohio Department of Job and Family Services (ODJFS) is the designated state agency that is responsible for oversight and compliance of the public and private children services agencies. Ohio's 88 county public children services agencies are responsible for the protection and safety of the children living within the county. In order to ensure that children are safe and that child welfare services are meeting the needs of children and families, the following programs and initiatives have been implemented in Ohio:

- Child Protection Oversight and Evaluation (CPOE) – a systematic process that ODJFS has put into place for monitoring and oversight of the compliance with rules by the county public children services agencies (PCSA). The CPOE process consists of an on-site review of each PCSA at least every 18 months. The process uses core indicators which provide information to support county practice and management. Following the on-site review, ODJFS prepares a final report that is shared with the agency. The PCSA is then required to submit to the Department, and implement, a quality improvement plan to correct findings of noncompliance.
- In 1997, Ohio implemented ProtectOHIO, a Title IV-E Child Welfare Waiver Demonstration project. ProtectOHIO pilots the flexible use of federal dollars in which funds normally allowed to be spent only for foster care are allowed to be spent for a range of child welfare purposes. The underlying premise for the waiver is that changes to federal child welfare eligibility and cost reimbursement requirements will change fiscal and service provision decisions that will be favorable to children and families. ProtectOHIO utilizes a managed care approach to increase the efficiency and effectiveness of the child welfare system, focusing on reducing the number of children coming into care; decreasing the length of stay in care; decreasing the number of placements experienced by children already in care; and increasing the number of children reunited with their families or placed in other permanent situations. There are 14 Ohio county public child welfare agencies which have participated in the first 5 years of the waiver.

An outcome evaluation was completed for the five-year project of the demonstration counties compared to the comparison counties which can be found on the ODJFS/Office for Children and Families website at <http://jfs.ohio.gov/ocf/programs.stm>. The U.S. Department of Health and Human Services has approved a five year extension of the ProtectOHIO waiver program through 2009.

- Child and Family Services Review (CFSR) – In 2001, the U. S. Department of Health and Human Services (HHS) began reviewing state child welfare services programs using performance-based outcomes to identify both the strengths and needs of State programs. The reviews examine the delivery of child welfare services and the outcomes for children and families served by Ohio's child welfare system in the areas of safety, permanency and well-being of children.

In January 2003, Ohio received the results of its first CFSR from HHS. A key finding of the CFSR was that Ohio did not achieve substantial conformity with any of the seven outcomes. The results for *safety for children* showed agencies are strong in making efforts to provide services to families to prevent removal of children while ensuring the child's safety and agencies were consistent in their efforts to reduce risk of harm to children. Improvement is needed in the development of strategies for reducing the incidents of repeat abuse and neglect. As a result of the findings of the review, Ohio

has implemented a Program Improvement Plan that addresses the areas needing improvement. The reports can be found at <http://jfs.ohio.gov/ocf/programs.stm>.

- Kinship Permanency Incentive Program (KPIP) - Kinship care represents the most desirable out-of-home placement option for children who cannot live with their parents. It offers the greatest level of stability by allowing children to maintain their sense of belonging and enhances their ability to identify with their family's culture and traditions. The Ohio Department of Job and Family Services is providing financial support to eligible kinship caregivers through the KPIP. Eligible caregivers can receive KPIP funds for each child in their care in addition to the Ohio Works First (OWF) Child Only cash assistance payment. For more information on KPIP, contact the county children services agency.

The actual number of children who are abused and neglected in Ohio is unknown. Many cases are not reported to authorities, and child protection services may sometimes incorrectly identify children who have not actually been harmed. In 2005, there were 29,337 substantiated reports of child abuse or neglect, including physical, emotional and sexual abuse. Forty-three percent of these reports were for neglect. The rate of substantiated reports per 1000 children has remained relatively constant statewide since 1993, although individual counties have experienced changes. For example, Cuyahoga County decreased its rate of substantiated reports from 20 per 1000 to 9 per 1000 during those years, while many other counties had increases. Rates in 2005 varied from over 20 per 1000 in Defiance, Clinton and Richland counties, to less than 5 per 1000 in Warren, Trumbull, Pickaway, Delaware, Putnam, Medina, and Geauga counties.

In Ohio, there has been a decline in the number of children in foster care and other substitute care placements over the past five years, but a growing number of youth are coming into the system for "unruly or delinquent" behavior - 24% in 2004. These youth stay in care longer and often require more expensive placements in group or residential care. Ohio also has a disproportionate percentage of African American children in foster care. Statewide, African American children are 15% of the population, but 50% of the children in the system.² Over 30,200 Ohio children were in substitute care in 2005, a 14% decrease in the rate per 1000 since 2001. However, individual counties were variable in their rates of increase or decrease in their foster care rates. Metropolitan counties had more than double the rate of children in substitute care (14.2 per 1000) as compared to rural, non-Appalachian (6.1) or suburban counties (5.8). (See Chart 10 for more data about Ohio's substitute care placements.)

The safety and welfare of Ohio’s children is a community responsibility. In addition to the public children services agencies, families, juvenile courts, legal professionals, medical and education personnel, substance abuse and mental health professionals, law enforcement and a multitude of state and local public and private agencies must work together to ensure the well-being of our children.

Chart 10

Substitute Care in Ohio, 2004	
INDICATOR	OHIO
Median Length of Stay in Months	14.6
Mean Number of Placements	2.9
Discharge Reason	
Reunification	41.8%
Live with Other Relatives	21.5%
Adoption	15.2%
Children without a recurrence of maltreatment within 6 mos (2003)	91.6%
Children re-entering care within 12 months of last episode	13.9%
Children re-entering care more than 12 months after last episode	14%

Adolescents Adjudicated for Felonies

There are many types of violence in children’s lives. Many children are exposed to violent media, domestic violence, fighting and bullying from other children, and other forms of violence in their communities. A few youth become perpetrators of crimes, including felony crimes such as robbery, assault, and homicide.³

Any discussion of juvenile crime should also note that youth are more likely to be crime victims than perpetrators. Nationally in 2001, one out of 18 youth age 16-19 were victims of violent crime in the past year, far above the rates of youth committing violent crimes. Boys are more likely to be victims as well as perpetrators of crime.³ There is also serious racial bias at all levels of the juvenile justice system nationally and in Ohio.

Chart 11

The higher rates of arrest and incarceration of minority youth are out of proportion to the relatively small differences in actual violent behavior between races. National data shows that African American and Latino youth also face more punitive treatment than white youth for the same offenses.⁴

Statewide in Ohio in 2005, 8,752 youths were adjudicated for felonies, or 13 out of every 1,000. Ninety percent were between the ages of 15 and 17, and the vast majority were male. The majority of the felonies were lower-level offenses with relatively few adjudications for the most serious offenses. Rates of adjudication varied greatly between Ohio counties, but are higher in metropolitan counties than in rural or suburban counties. The rate of youth adjudications decreased statewide by 13% from 2001 to 2005 (see Chart 11).

Turning Data Into Action:

A Child's Safety Net

There was a time when a child who was a victim of abuse was often re-victimized by the agencies and people who were supposed to help because of the lack of training in appropriate interview techniques. In 1985, the National Children's Advocacy Center (NCAC) was organized as the leading organization in the country for training child abuse professionals to create a better system to help abused children. The NCAC mission is to model, promote and deliver excellence in child abuse response and prevention through service, education, and leadership. This work provides hope for the 250,000 children who are victims of abuse every year. The child advocacy center (CAC) model pulls together law enforcement, criminal justice, child protective service, medical and mental health professionals into one coordinated team. A CAC is a child-focused, community-oriented, facility-based program for use by the team to discuss and make decisions about investigation, treatment and prosecution of child abuse cases and efforts to prevent further victimization of children. The NCAC model programs include:

- CAC Model
- Family Advocate Model
- Forensic Evaluation Model
- Forensic Interviewing Model
- SCAN (Stop Child Abuse and Neglect) Model

There are nearly 500 established and developing children's advocacy centers in the United States with continual growth.

The Ohio Network of Children's Advocacy Centers (ONCAC) was established in 1999. The ONCAC's mission is to promote the establishment and success of multidisciplinary teams and children's advocacy centers by providing support, education, and networking opportunities to enhance Ohio's response to child abuse. There were over 29,000 Ohio children abused and neglected in 2005.

The CACs are designed by communities to meet their own needs, so there are as many types of facilities in which CACs exist as there are different kinds of communities. One of the member CACs is located in Columbus, (Franklin County) Ohio. The Center for Child and Family Advocacy (CCFA), a joint effort of the Nationwide Children's Hospital (formerly Columbus Children's Hospital) and the Columbus Coalition Against Family Violence (CCAFV) opened in January 2005. A national model, it was the first organization of its kind to fully integrate domestic violence and child abuse services. The CCFA provides a safe and supportive environment for families affected by violence. Representatives from local law enforcement agencies, medical services, and crisis care in addition to community resources, collaborate to educate and inform the public about domestic abuse. The CCFA program provides a holistic care management model unavailable in traditional settings.

Working closely with the Center, representatives from the Franklin County Sheriff's Office, Columbus Police Department, Franklin County Children Services and a victim's advocate from the Prosecutor's Office jointly collect information about each case and videotape the forensic interview, reducing the need for children to recount potentially traumatic experiences on multiple occasions.

The Franklin County model for Child and Family Advocacy is only one type of model for a Children's Advocacy Center. However, what makes it a unique and national model is the inclusion of a domestic violence program (CHOICES for Victims of Domestic Violence) and prevention program (Prevent Child Abuse Ohio).

The CHOICES program has placed an outpatient treatment center at the CCFA. CHOICES provides crisis and advocacy services to women who are in need as a result of domestic violence; while Franklin County Children Services provides a multi-pronged approach, making arrangements for short and long term placement options for children if necessary.

Prevent Child Abuse Ohio, the state affiliate of Prevent Child Abuse America, provides education and information resources for professionals, communities and families about child abuse. Prevent Child Abuse Ohio is the primary preventative organization at the CCFA.

The Franklin County model for Child and Family Advocacy is an example of one model for a Children's Advocacy Center. There are 29 other child advocacy centers located throughout the state of Ohio, each adapting to its community's specific set of needs. For instance, A Caring Place Child Advocacy Center in Jefferson County serves a smaller number of clients than Franklin County, and thus chooses to focus its efforts on child abuse services and collective forensic interviewing. The Tri-County Child Advocacy Center, serving primarily Trumbull, Mahoning, Ashtabula and Columbiana counties is a medical model similar to CCFA, although it is located off-site from its partner hospital.

Children's Advocacy Centers like A Caring Place, Tri-County CAC and the Center for Child and Family Advocacy are helping to stem violence against Ohio's children and promote a sense of community that provides a safe place for kids to live and grow.

For more information on Children's Advocacy Centers, contact the Ohio Network of Children's Advocacy Centers at (614) 846-2844 and the Franklin County Children's Advocacy Center at (614) 722-8200.

Please note: Rates per 1,000 are not given for numbers smaller than 10. Children are defined as persons under the age of 18.

Demographics

Estimated Total Population

Estimated Child Population

Source: US Census Bureau, Population Estimates Program

Definition: An estimate of the population in Ohio counties for July 1 of each year. Existing data series such as births, deaths, Federal tax returns, Medicare enrollment, and immigration, are used to update the decennial census base counts.

Economic Security

Children Living in Poverty

Source: US Census Bureau, Small Area Income and Poverty Estimates (SAIPE)

Definition: An estimate of the number and percentage of children under 18 living below the Federal Poverty Line each year. Please note that each estimate has a margin of error above or below, which can be quite large for smaller Ohio counties.

Children Receiving Free/Reduced Lunch

Source: Children's Hunger Alliance

Definition: The number and percentage of children that have applied for the free or reduced price lunch program in Ohio schools in October of each school year. Children must live in families below 185% of the federal poverty line to qualify for the program.

Children Receiving Food Stamps

Source: Bureau of Program Policy, Office of Family Stability, Ohio Department of Job and Family Services

Definition: The number and percentage of children receiving food stamps in July of each year.

Unemployment Rate

Source: Ohio Department of Job and Family Services, Office of Work Force Development

Definition: Persons who were not employed, but who were actively seeking work, waiting to be called back to a job from which laid off, or waiting to report within 30 days to a new payroll job. The unemployment rate is expressed as a percentage of the civilian labor force.

Children in Child Care Assistance Program

Source: Ohio Department of Job and Family Services, Bureau of Child Care

Definition: Parents who are working or in school and meet the eligibility requirements are eligible to receive help with child care costs. The amount paid is based on income, family size and the number of children in child care.

Health

Births to Adolescents

Source: Ohio Department of Health

Definition: The number of births to adolescents younger than 18 and the rate per 1000 adolescents ages 15-17. Births for residents of some border counties may not be included in the 2005 data.

Infants Born at Low Birth Weight

Source: Ohio Department of Health

Definition: The number and percent of babies born weighing less than 5.5 lbs at birth. Births for residents of some border counties may not be included in the 2005 data.

Children in Public Health Care Program

Source: Ohio Department of Job and Family Services, Office of Ohio Health Plans -Medicaid Program

Definition: Children eligible for Healthy Start (SCHIP) are younger than age 19 and in a family with income up to 300% of the federal poverty level; children eligible for Healthy Families coverage are younger than age 19 and in a family with income up to 90% of the federal poverty level.

Education

Fourth Graders Proficient or Better in Reading

Fourth Graders Proficient or Better in Math

Source: Ohio Department of Education

Definition: The average percentage of students who scored proficient or better on fourth grade math and reading tests. School districts were assigned to the county where their district office is located.

Students Graduating From High School

Source: Ohio Department of Education

Definition: The number of high school graduates and the percent who graduated on-time. School districts were assigned to the county where their district office is located.

Safety

Children Abused or Neglected

Source: *Ohio Department of Job and Family Services, Office for Children and Families*

Definition: Substantiated reports of child abuse and neglect and the rate per 1000 children, including emotional maltreatment, neglect, physical abuse and sexual abuse.

Children In Foster Care

Source: *Ohio Department of Job and Family Services, Office for Children and Families*

Definition: The number of children in substitute care each year and the rate per 1000 children. This includes children who were in care on January 1 of each year, along with children who entered care during that calendar year. This reflects children placed by public agencies only.

Adolescents Adjudicated for Felonies

Source: *Ohio Department of Youth Services*

Definition: The number of children adjudicated for felony-level offenses. Since the vast majority of these offenses are committed by youth age 14-17, the rate compares the number of youth adjudicated to the total population of 14-17 year olds. Youth with more than one adjudication in a calendar year are counted only once.

Kids Count Advisory Group Members

NAME	AGENCY
Roderick Aldridge	First Link-Franklin County
Berna Bell	Ohio Hospital Association
