

PROTECT CHILDREN INSTEAD OF GUNS 2002

The latest deadly numbers about children and gun violence in a single year show:

- 3,012 children and teens were killed by gunfire
- 1,776 were murdered by gunfire
- 1,007 committed suicide with a firearm
- 193 died from an accidental shooting
- 1,762 were White
- 1,149 were Black
- 568 were Latino
- 433 were under age 15
- 129 were under age 10
- 59 were under age 5
- More children and teens died from gunfire than from cancer, pneumonia, influenza, and HIV/AIDS combined.

T

he latest data released in 2002 show that in a single year, 3,012 children and teens were killed by gunfire in the United States—which is one child every three hours, eight children every day, more than 50 children every week. And, every year, four to five times as many children and teens suffer from non-fatal firearm injuries.

Despite these alarming numbers, child and youth gun deaths are on the decline. After peaking in 1994 at more than 5,700 young lives, child and teen firearm deaths have dropped 48 percent overall. Additionally, the number of Black children and teens killed by guns has decreased 55 percent, and the number of White children and teens has dropped 42 percent. Although it is encouraging that the number of child gun deaths per year has fallen dramatically, the number remains disturbingly high. We are still losing too many children. When compared to other industrialized countries, the numbers are even more staggering. According to the Centers for Disease Control and Prevention, the rate of firearm deaths among children under age 15 is almost 12 times higher in the United States than in 25 other industrialized countries combined. American children are 16 times more likely to be murdered with a gun, 11 times more likely to commit suicide with a gun, and nine times more likely to die in a firearm accident than children in these other countries. The needless loss of young lives to gun violence continues to be one of America's silent tragedies.

Firearms deaths, by manner and by race, persons under age 20, 1979-2000
(excludes legal intervention)

Year	Total	Homicide	Suicide	Accident	Unknown	Black	White

Calculations by Children's Defense Fund.

Did you know?

- Children are twice as likely as adults to be victims of violent crime and more likely to be killed by adults than by other children.
- 61 percent of the more than 90,000 youths killed by gunfire between 1979 and 2000 were White; 36 percent were Black.
- Black children and teens are more likely than their White counterparts to be victims of firearm homicide. White children and teens are more likely than their Black counterparts to use a firearm to take their own life.
- The firearm death rate for Black males between ages 15 and 19 is four times that of White males in the same age group.
- Boys, ages 15 to 19, are more than seven times more likely than girls to commit suicide with a firearm.

In 2000, homicides accounted for 1,776 gun deaths among children age 19 and younger. Although most child gun deaths are homicides, two out of every five young firearm deaths are the result of suicide or an accidental shooting. One-third of young people killed by guns take their own lives. In 2000, gun suicide accounted for 1,007 child and teen deaths—an average of almost three young people every day. Guns are used in two out of three youth suicides and, unlike other attempted methods, are the most likely to be fatal. Accidental shootings accounted for just over 6 percent of child firearm deaths in 2000; 193 children and teens lost their lives in accidental shootings. As with adolescent suicide, a vast majority of firearms used in unintentional shootings of children and teens come from the victim's home or the home of a relative, friend, or parent of a friend of the victim. A study reported in the *American Journal of Public Health* found that 1.4 million homes with 2.6 million children had firearms that were stored unlocked and loaded or unlocked and unloaded but stored with ammunition. A separate study published in *Injury Prevention* compared firearm ownership in rural and urban areas and found that the prevalence of loaded, unlocked guns in farm households was about twice the level of town households.

We must do more to protect children from the senseless gun violence that has already taken 90,000 young lives in America since 1979.

The mission of the Children's Defense Fund (CDF) is to *Leave No Child Behind*[®] and to ensure every child a *Healthy Start, a Head Start, a Fair Start, a Safe Start, and a Moral Start* in life and successful passage to adulthood with the help of caring families and communities.

CDF provides a strong, effective voice for *all* the children of America who cannot vote, lobby, or speak for themselves. We pay particular attention to the needs of poor and minority children and those with disabilities. CDF educates the nation about the needs of children and encourages preventive investment before they get sick, into trouble, drop out of school, or suffer family breakdown.

CDF began in 1973 and is a private, nonprofit organization supported by foundation and corporate grants, and individual donations. We have never taken government funds.
